**Ufd12. "Cane's Walk Strip" (0.7 ha) TL 456395**

This field headland comprises scrubby chalk grassland with a flora that includes several rare Essex plants, such as Stemless Thistle (*Cirsium acaule*) and Rockrose (*Helianthemum nummularium*). Besides holding a rare assemblage of plants, this site provides a valuable, contrasting "edge" habitat to the two adjacent woods, linking them into one ecological unit.

Date of selection/last revision: 1994
