Ufd162. Redgates (1.6 ha) TL 570389

This site comprises flower-rich chalky grassland with scrub. The main species of interest is the large population of Wild Liquorice (*Astragalus glycyphyllos**), but the species-rich sward also includes Agrimony (*Agrimonia eupatoria*), Yellow-wort (*Blackstonia perfoliata**), Black Knapweed (*Centaurea nigra*), Wild Basil (*Clinopodium vulgare*), Common Spotted Orchid (*Dactylorhiza fuchsii*), Fairy Flax (*Linum catharticum**) and Bird's-foot Trefoil (*Lotus corniculatus*).

LoWS Selection Criteria: HCr15, SCr15

Condition and Management Issues: A reduction in the extent of scrub would be desirable, although some scattered scrub would be beneficial to invertebrates and birds.

Date of first designation: 30/09/2007

Date of last revision:
